# SENSOR SETTINGS

**DETECTION AREA** - It can be adjusted by combining DIP switches for specific application [FIG 1].

**HOLD TIME** - Time period during which the light will be ON after the last detection [FIG 2].

**DAYLIGHT THRESHOLD** - Daylight sensor priors motion sensor. Set Threshold for Specific needs. If disabled, only motion sensor will work [FIG 3].

**STAND-BY DIMMING LEVEL** - The dimming level during which the light is ON during the stand-by Period [FIG 4].

**STAND-BY PERIOD** - This is the time period during which the light keeps dimming down after the last detection [FIG 5].

## AUTOMATICALLY ON/OFF FUNCTION

With sufficient daylight, even when motion detected, light remains OFF

With insufficient daylight, the sensor turns light ON when motion gets detected.

The sensor turns OFF light automatically after the holdtime when there's no motion detected.

## DAYLIGHT DISABLE

The sensor turns light ON when motion gets detected.

The sensor keeps light ON for holdtime period after motion leaves.

The sensor turns OFF light automatically after the holdtime.

When daylight threshold is preset as "disable", the sensor turns light ON when motion gets detected, and OFF after holdtime.

## CORRIDOR FUNCTION, BI-LEVEL DIMMABLE

With sufficient daylight, the sensor keeps light OFF even motion gets detected

With insufficient daylight, the sensor turns light ON when motion gets detected.

After there's no motion detected, the sensor keeps light ON 100% for holdtime.

After holdtime, sensor dims light to standby dimming level for standby period.

The sensor turns OFF light automatically after the standby period when there's no motion detected.
