

HF-PERFORMER II (flat) TL5

## Product Description

- Flat, slim, lightweight High Frequency electronic gear for TL5 fluorescent lamps, based on Ell technology

## Features and Benefits

- Unique benefits of the new Philips Ell technology:
- Optimised system efficiency, minimised gear power losses
- Miniaturised dimensions for total HF-Performer IITL5 range
- Simplified portfolio allowing flexible, modular luminaire design
- Cooler product allows more compact luminaire design
- Fast preheat for short ignition time ( 0.5 s )
- Programmed start: flicker-free, warm start circuit preheats ( 0.5 s) the lamp electrodes; lamps can be switched on and off without reducing useful life
- Smart power: constant light independent of mains voltage fluctuations
- Unit is protected against excessive mains voltages and incorrect connections
- Automatic stop circuit is activated within 5 seconds in case of lamp failure (safety stop); gear resets automatically after lamp replacement
- Universal connector for both manual and automatic wiring

## Applications

- Ideal for applications with high switching frequency, for example:
- Use with infrared remote control systems (e.g. movement detection)
- Department stores, shops, supermarkets, hotels, hospitals, office buildings, industrial premises
- Airports, railway stations
- Outdoor lighting; in general suitable for Class I applications
- Installations with emergency back-up according to VDE 0108-100 / EN 60598-2-22 with re-ignition <0.5 s

## Quality

Philips Quality assures optimum quality regarding:

- System supplier:As manufacturer of lamps, electronic control gear and lighting control equipment, Philips ensures that, from the earliest development stage, optimum lamp/gear performance is maintained.
- International standards: Philips HF electronic regulating gear's complies with all relevant international rules and regulations.

Electrical installation notes
Mains operation
Rated mains voltage
220-240V
Tolerances for performance $+6 \%-202-254 \mathrm{~V}$
8\%
With tolerances for safety $+/-10 \%$
Mains frequency
Power factor
Earth leakage current
Ignition time
Constant light operation

Overvoltage protection
198-264V
$50 / 60 \mathrm{~Hz}$
$>0.95$
$<0.5 \mathrm{~mA}$ per gear
0.5 sec . maximum of $\pm 2 \%$ 48 hrs at 320 VAC

In case of $A C$ mains voltage fluctuations, within 202-254V, the luminous flux changes by a 2 hrs at 350 V AC
Dual fixture: master-slave operation Not advised
Automatic restart after lamp replacement or voltage dip

Insulation resistance test
Yes: tested with a dip down to $30 \%$ with a duration of 10 mains cycles
500 V DC from both mains inputs

Lamp wiring to earth (not between Line and Neutral) Note: Ensure that the neutral is reconnected again after above mentioned test is carried out and before the installation is put in operation
The use of 500 V rated components and wiring are required with HF-PERFORMER TL5

## DC/Emergency operation

DC voltage operation (during emergency back-up)
Required battery voltage for 198-254V
guaranteed ignition
Required battery voltage for 176-254V
burning lamps
Nominal light output is obtained at 220-240V
a voltage of
Notes:
I. For a continuous DC application, an external fuse should be used in the luminaire.
2. Continuous low DC voltages (<198V) can influence the lifetime of the gear.

Inrush current
Conversion table for max. quantities of gears on other types of Miniature Circuit Breaker

| G, U, II | 16 A | $212 \%$ |
| G, U, II | 10 A | $127 \%$ |
| K, III | 16 A | $254 \%$ |
| K, III | 10 A | $154 \%$ |

TLS

## Notes:

I. Data is based on a mains supply with an impedance of $400 \mathrm{~m} \Omega$ (equal to 15 m cable of $2.5 \mathrm{~mm}^{2}$ and other 20 m to the middle of the power distribution), under worst case conditions. With an impedance of $800 \mathrm{~m} \Omega$ the number of gears can be increased by $10 \%$.
2. Measurements will be verified in real installations; therefore data are subject to change.
3. In some cases the maximum number of gears is not determined by the MCB but by the maximum electrical load of the installation.
4. Note that the maximum number of gears is given when these are all switched on at the same moment, i.e. by a wall switch.
5. Measurements were carried out on single-pole MCB's. For multipole MCB's it is advisable to reduce the number of gears by $20 \%$.
6. The maximum number of gears which can be connected to one Residual Current Detector of 30 mA is 30 .

## Mechanical installation notes

Technical data for design and mounting HF gears in fixtures
Temperatures
Temperature range to ignite lamp $\quad-25^{\circ} \mathrm{C} . .+50^{\circ} \mathrm{C}$
with ignition aid
Max Tcase
$75^{\circ} \mathrm{C}$
Lifetime of a gear depends on the temperature of the gear. This means there is a relation between the Tc point on the gear and its lifetime.
This gear range has a specified lifetime of 50.000 hrs , with a maximum of $10 \%$ failures guaranteed, at a measured Tcase of $75^{\circ} \mathrm{C}$. For more information regarding this subject consult the Philips Application guide to fluorescent lamp control gear.
Hum and noise level
inaudible

HF-P I

HF-P 3

Permitted humidity is tested according to EN6I347-I par. II. Note that no moisture or condensation may enter the gear.
The gears that are thermally protected use a protective method of another type providing equivalent thermal protection.
Connector type:
Connection wiring is greatly simplified through use of WAGO universal connector. Suitable for both automatic wiring (ALF and ADS) and manual wiring; earth connection can be made via the earth terminal on the mains side.
Please note:With the HF-P 3 /4 lamp gears (14,24W) earth connection must be made via the housing.
Wire lengths:
For optimal performance, note that following wires need to be kept short:
I. For one lamp circuits keep wires to terminals I and 2 short
2. For two lamp circuits keep wires to terminals $I, 2,6$ and 7 short
3. For triple and quad lamp circuits keep wires to terminals I, 2, 13 and 14 short
