

# HF-REGULATOR electronic regulating ballasts for TL5 lamps

## Definition

Slim, lightweight high-frequency electronic regulating ballast for TL5 fluorescent lamps.

## Description

- The lamp power can be regulated down to 3%
- Striation-free operation
- 1 - 10 V control input (European standard)
- Programmed start: flicker-free warm start, ideal for areas with a high switching frequency
- Up to 60% reduction in energy consumption can be achieved by using automatic lighting control systems.

All Philips HF-REGULATOR electronic ballasts are equipped with  $\alpha$ -control. This is a dedicated integrated circuit that ensures independent control of each electrode and, in doing so, takes care that:

- a. lamp life is unaffected by dimming position;
- b. lamp burning is stabler in every dimming position; and
- c. energy savings, when dimming, are maximised.

## Applications

Typical areas of application include:

- 1 - 10 V installations with daylight linking and/or movement detection (energy saving)
- 1 - 10 V installations with remote control systems (comfort)
- Installations with emergency back-up, according to VDE 0108

## Examples:

- Office buildings: insurance companies, banks, government ministries
- Corridors
- Department stores, shops, supermarkets
- Hotels
- Hospitals
- Cinemas.

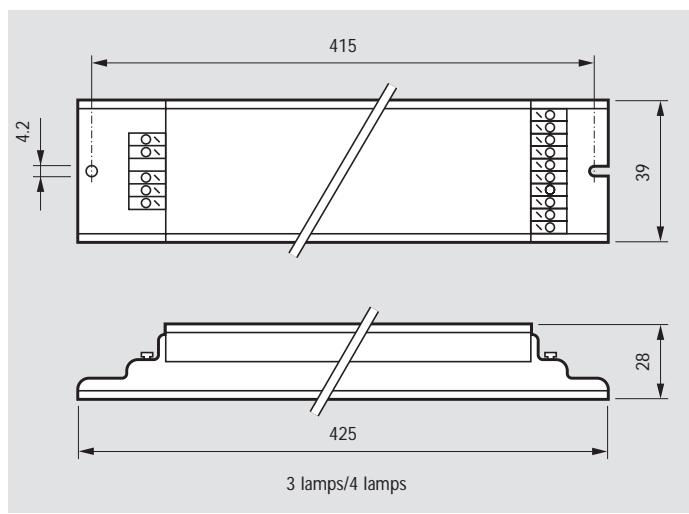

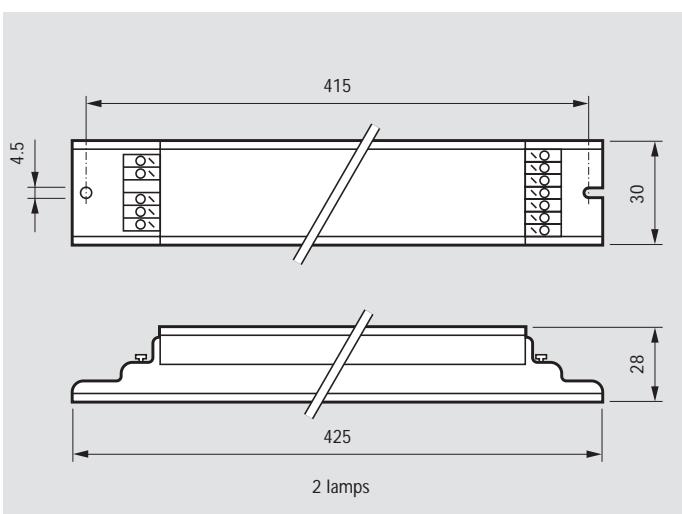

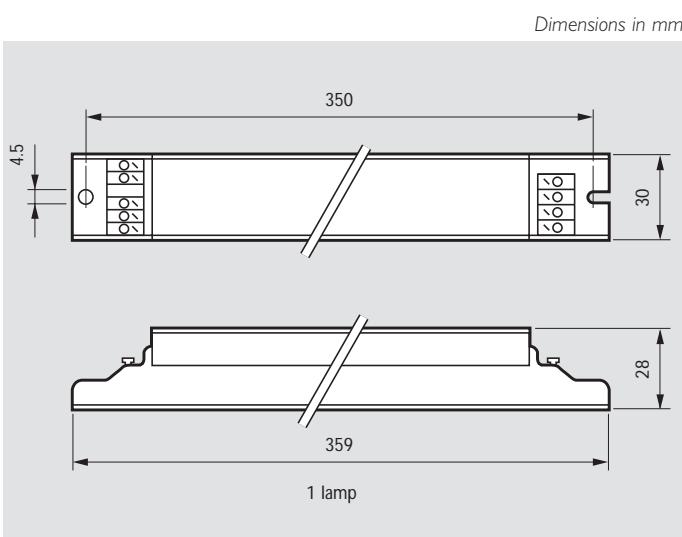

## Philips quality

This implies optimum quality with respect to:

- System supplier As manufacturer of lamps, electronic control gear and lighting control equipment, Philips ensures that, from the earliest development stage, optimum performance is maintained
- International standards Philips HF electronic regulating ballasts comply with all relevant international rules and regulations.

## Compliances and approvals

- RFI < 30 MHz: EN 55015
- RFI > 30 MHz: EN 55022 A
- Harmonics: EN 61000-3-2
- Immunity: EN 61547
- Safety: EN 60928
- Performance: EN 60929-1E
- Vibration & bump tests: IEC 68-2-6 FC  
IEC 68-2-29Eb
- Quality standard: ISO 9001
- Environmental standard: ISO 14001
- Approval marks: ENEC  
VDE-EMV
- CE marking.

# HF-REGULATOR electronic regulating ballasts for TL5 lamps

## Technical data for installation

### Mains operation

Rated mains voltage with tolerances for safety: +/- 10%	220 - 240 V**
tolerances for performance: +6% -8%	198 - 264 V**
Mains frequency	202 - 254 V
Operating frequency	50/60 Hz
Power factor	> 42 kHz
	0.90*; 0.95 at 100% power

Smart power: with AC mains voltage fluctuations, luminous flux varies by ± 2% max.

### DC voltage operation (during emergency back-up)

Required battery voltage for guaranteed ignition	198 - 254 V DC
Required battery voltage for burning lamps	176 - 254 V DC
Nominal light output is obtained at a voltage of	220 - 240 V DC

### Notes:

- For a continuous DC application, an external fuse should be used in the luminaire.
- Continuous low DC voltage (< 198 V) can influence lifetime of the ballast.

### Control input

Control voltage	1 - 10V DC
Protected against accidental mains voltage connection	yes

### Regulating level (lamp power)

The control input complies with EN 60929, (Amendment 1, Annex E) and is compatible with Philips lighting control equipment.

### Ignition time

< 2 s

### Earth leakage current

< 0.5 mA per ballast

### Overvoltage protection

48 hrs at 320 V AC  
2 hrs at 350 V AC

### Lamp wiring for HF-R...TL5

500 V rated components and wiring are required with HF-REGULATOR TL5

### Dual fixture; master slave operation

not advisable

Advised maximum cable capacity for optimum performance and EMI suppression

max. 15 pF between two sets of lamp wires (each set of lamp wires is connected to one electrode of the lamp max. 75 pF: between one set of lamp wires (connected to one electrode of the lamp) and earth

### Automatic restart after lamp replacement or voltage dip

yes (for 1- and 2-lamp ballasts); for 3- and 4-lamp ballasts, the mains power needs to be reset.

\* Value for 1 x 14 W and 1 x 21 W types

\*\* Value for 1 x 80 W

## Insulation resistance test

500 V DC from Line/Neutral to Earth (not between Line and Neutral)

Note: Ensure that the neutral is reconnected again after abovementioned test is carried out and before the installation is put into operation.

## Mains current at 230 V

\* At 100%.

### Relationship between lamp power and control voltage

## Technical data for design and mounting HF ballasts in fixtures

### Temperatures

Temperature range to ignite lamp with ignition aid	+10 ° to +50 °C
Stable lamp operation assured	> 15 °C
Striation possible	< 15 °C

Max. tcase = 75°C\*\*

Note:

Lifetime of a ballast depends on the temperature of the ballast. This means there is a relation between the T<sub>c</sub> point on the ballast and its lifetime. For more information regarding this subject consult the Philips Application guide to fluorescent lamp control gear.

## Class II luminaires

this application is not advisable; only with extensive tests on luminaires can the correct operation be verified

### Hum and noise level

inaudible

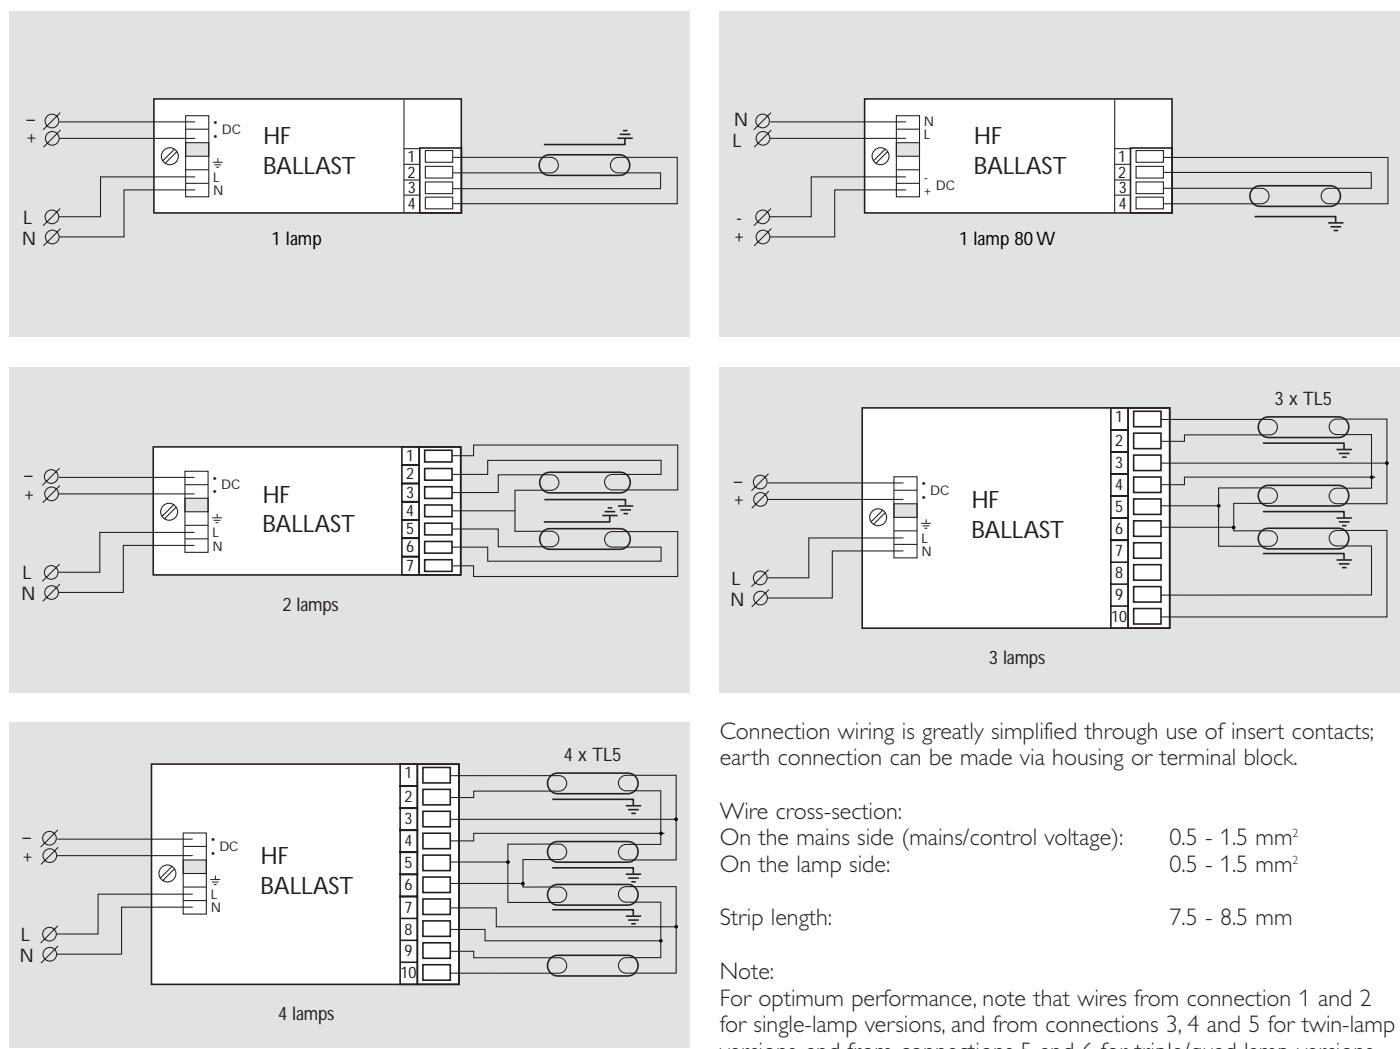

Permitted humidity is tested according to IEC 928 par. 12.  
Note that no moisture or condensation may enter the ballast.

The ballasts that are thermally protected use a protective method of another type providing equivalent thermal protection.

## Notes:

1. Data is based on a mains supply with an impedance of  $400 \text{ m}\Omega$  (equal to 15 m cable of  $2.5 \text{ mm}^2$  and another 20 m to the middle of the power distribution), under worst case conditions. With an impedance of  $800 \text{ m}\Omega$  the number of ballasts can be increased by 10%.
  2. Measurements will be verified in real installations; therefore data are subject to change.
  3. In some cases the maximum number of ballasts is not determined by the MCB but by the maximum electrical load of the lighting installation.
  4. Note that the maximum number of ballasts is given when these are all switched on at the same moment, i.e. by a wall switch.
  5. Measurements were carried out on single-pole MCB's. For multi-pole MCB's it is advisable to reduce the number of ballasts by 20%.
  6. First digital regulating steps are fixed at 3% light output (dimming specification).

# HF-REGULATOR electronic regulating ballasts for TL5 lamps

Wiring diagrams

Connection wiring is greatly simplified through use of insert contacts; earth connection can be made via housing or terminal block.

Wire cross-section:

On the mains side (mains/control voltage): 0.5 - 1.5 mm<sup>2</sup>

On the lamp side: 0.5 - 1.5 mm<sup>2</sup>

Strip length:

7.5 - 8.5 mm

Note:

For optimum performance, note that wires from connection 1 and 2 for single-lamp versions, and from connections 3, 4 and 5 for twin-lamp versions, and from connections 5 and 6 for triple/quad-lamp versions should be kept short and equal in length.
