HF-REGULATORII I-10V

**1-10V**

**E II**  
TECHNOLOGY

## HF-REGULATORII TL5

### Product description

Flat, lightweight high-frequency electronic regulating ballast, using I-10V protocol, for TL5 fluorescent lamps. The HF-REGULATORII ballasts incorporate the new Philips E II technology.

### Features and benefits

- The lamp power can be regulated between 100% to 1%.
- Flat ballast design, 21 mm high.
- Up to 60% reduction in energy consumption can be achieved by using automatic lighting control systems.
- Quick programmed start: 0.5 sec, flicker-free warm start, preheating the lamp electrodes. This enables the lamps to be switched on and off without reducing useful life. Ideal for areas with a high switching frequency.
- Analog control input according to the industry standard I-10V.
- Increased lamp wire flexibility thanks to the Parasitic Capacitance Compensation (longer lamp wiring possible up to 2 meter).
- Smart power: constant light, independent of mains voltage fluctuations.
- Unit is protected against excessive mains voltages, incorrect connections and incorrect lamp use.
- Striation-free operation, no stroboscopic effects.
- Automatic stop circuit is activated within five seconds in case of lamp failure (safety stop). Once the lamp has been replaced, the ballast resets automatically.
- Equipped with connectors suitable for automatic wiring machines.

The Philips HF-REGULATORII electronic ballasts are equipped with E II-dim technology. This is a dedicated integrated circuit that ensures independent control of each electrode and, in doing so, takes care that:

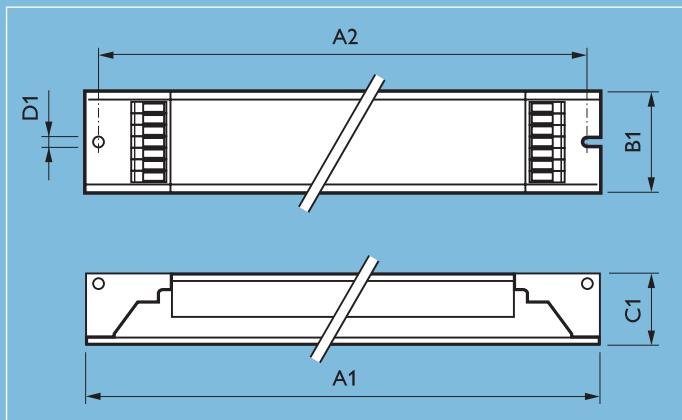

- a. lamp life is unaffected by dimming position
- b. lamp burning is stable in every dimming position; and
- c. energy savings, when dimming are maximised.

### Applications

Typical areas of application include:

- I-10V installations with daylight linking and/or movement detection (for energy savings)
- I-10V installations with remote control systems (combining energy savings with comfort)
- Installations with emergency back-up, according to IEC 60598-2-22/VDE 0108.

HF-REGULATOR// TL5

## Examples

- Office buildings: insurance companies, banks, government ministries
  - Cellular or open plan offices
  - Conference rooms, lecture theatres, corridors
- Schools
- Hospitals
- Department stores, shops, supermarkets
- Hotels, restaurants and bars
- Cinemas, museums.

## Philips quality

This implies optimum quality with respect to:

- System supplier
  - As manufacturer of lamps, electronic control gear and lighting control equipment, Philips ensures that, from the earliest development stage, optimum performance is maintained.
- International standards
  - Philips HF electronic regulating ballasts comply with all relevant international rules and regulations.

## Compliances and approvals

- RFI<30 MHz: EN 55015
- RFI>30 MHz: EN 55022 Limit B
- Harmonics: IEC 61000-3-2
- Immunity: IEC 61547
- Safety: IEC 61347-2-3
- Performance: IEC 60929
- Vibration & bump tests: IEC 60068-2-6-FC
- Quality standard: IEC 60068-2-29-Eb
- Environmental standard: ISO 9001
- Approval marks: ENEC
- EMV-VDE
- Temp. declared thermally protected: IEC 61347-1 
- CE marking

## Technical data for installation

Mains operation	
Rated mains voltage	220-240 V
With tolerances for safety: +/- 10%	198-264 V
Tolerances for performance +6%-8%	202-254 V
Mains frequency	50/60 Hz
Smart power: with AC mains voltage fluctuations, luminous flux varies by ± 2% max.	202-254 V

DC voltage operation (during emergency back-up)

- Required battery voltage for guaranteed ignition 198V – 254 V
- Required battery voltage for burning lamps 176V – 254 V
- Nominal light output is obtained at a voltage of 220V – 240 V

Notes:

1. For continuous DC application, an external fuse should be used in the luminaire.
2. Continuous low DC voltages (<198 V) can influence the lifetime of the ballast.
3. For the HF-R 280 TL5/PL-L EII lamp power will be limited to 50% of the nominal lamp power when operating on DC.

Earth leakage current	< 0.5 mA per ballast
Maximum number of ballasts which can be connected to one Residual Current Detector of 30 mA	30
Oversupply protection	48 hrs at 320 V AC 2 hrs at 350 V AC
Automatic restart after lamp replacement or voltage dip	Yes

## Mains current at 230V

HF-R 280 TLS/PL-L EII	2x80	9	35A/350 µS	

### Conversion table for max. quantities of ballasts on other types of Miniature Circuit Breakers

MCB Type	Relative quantity of ballasts
B	100%(see table on the left)
B	10A
C	16A
C	10A
L, I	16A
L, I	10A
G, U, II	16A
G, U, II	10A
K, III	16A
K, III	10A

Insulation resistance test      500 V DC from Line/Neutral to Earth (not between Line and Neutral)  
 Note: Ensure that the Neutral is reconnected again after the above mentioned test is carried out and before the installation is put into operation.

TL5 lamp wiring      500 V rated components and wiring are required with HF-REGULATOR// TL5.

Ignition time      Typical 0.5 sec. quick warm start.

### Technical data (all typical values at Vmains =230 V)

1) Lp-Lp = between lamp wires      Typical wire capacitance 50 pF/m (spacing between wires 0.5 mm)  
 Lp-Lgnd = between lamp wires and ground      Typical wire capacitance 72 pF/m (spacing between wires 0.5 mm)

## Control input

Regulating level (lamp power)

1 to 100%

The control input complies with IEC 60929

(Annex E) and is compatible  
with Philips lighting control equipment

Control input insulation, basic insulation

≥ 1500 V

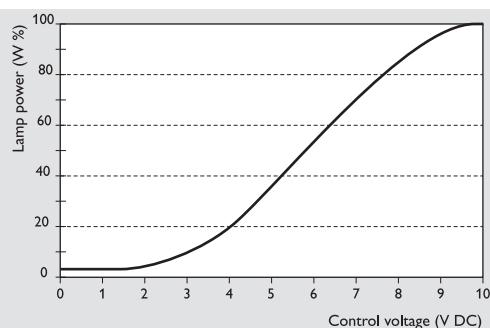

Protected against accidental mains voltage connection

Yes

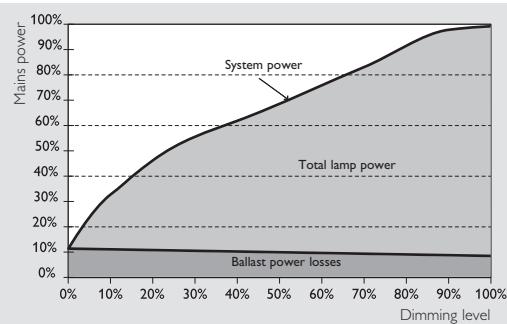

# Fluorescent electronic

(Additional to Chapter 3.138 catalogue 2005/2006)

HF-REGULATOR// TL5

Relationship between lamp power and control voltage

Input power vs dimlevel HF-REGULATOR// (1-10V)

## Technical data for design and mounting in fixtures

### Temperatures

Temperature range to ignite lamp	0 °C to +50 °C
With ignition aid at a 70..100% dim input	-20 °C to +50 °C

Storage temperature range -25 °C to +80 °C

Stable lamp operation assured > 15 °C\*

Striation possible < 10 °C

\* > 20 °C for HF-R 280 TL5/PL-L Ell

Maximum Tcase 75 °C

The lifetime of a ballast depends on the temperature of the ballast. This means there is a relation between the Tc point on the ballast and its lifetime. The HF REGULATOR// ballast for TL5 applications has a specified lifetime of 50,000 hrs with a maximum of 10% failures guaranteed at a measured Tcase of 75 °C. For more information regarding this subject consult the Philips Application guide to fluorescent lamp control gear.

### Class II luminaires

This application is not advisable; only with extensive tests on luminaires can the correct operation be verified

EMI precautions have to be taken

### Outdoor

Ballast IP=23

In outdoor the luminaire has to be sufficiently IP rated

Permitted humidity is tested according to IEC 61347-1 par 11

Note that no moisture or condensation may enter the ballast

### Ignition aid

For optimum ignition the TL5 lamps should be mounted at a maximum distance of 6 mm from a metal plate. The metal plate should be electrically connected to the ballast housing

### Earthing

Earthing of the HF ballast in a luminaire is necessary for EMC (electromagnetic compatibility)

### Hum and noise level

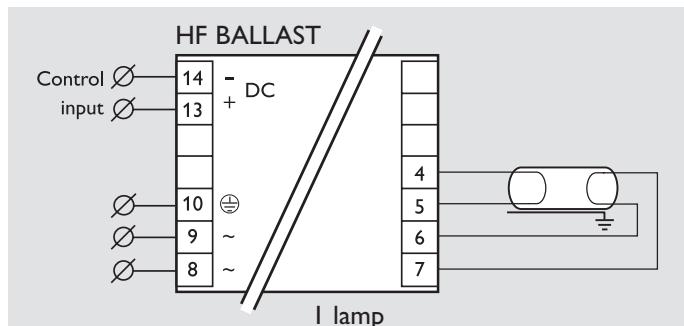

Inaudible

# Fluorescent electronic

HF-REGULATOR// TL5

## Wiring diagrams

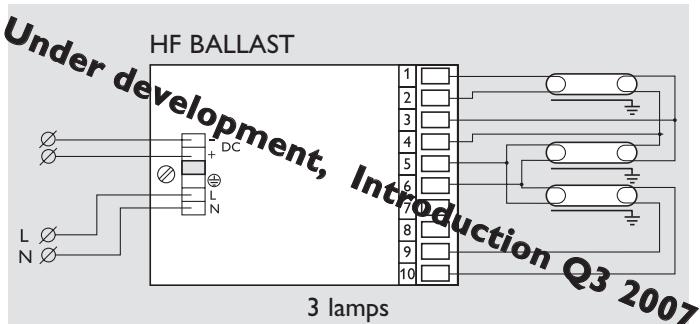

## Connector type

Connection wiring is greatly simplified through use of WAGO 251 universal connector. Suitable for both automatic wiring (ALF and ADS) and manual wiring.

## Wire cross-section

IDC connection	0.5 mm - 1.0 mm <sup>2</sup>
ADS manual connection *Stranded wire	0.5 mm – 0.75 mm <sup>2</sup> *
Strip length	8.0 – 9.0 mm

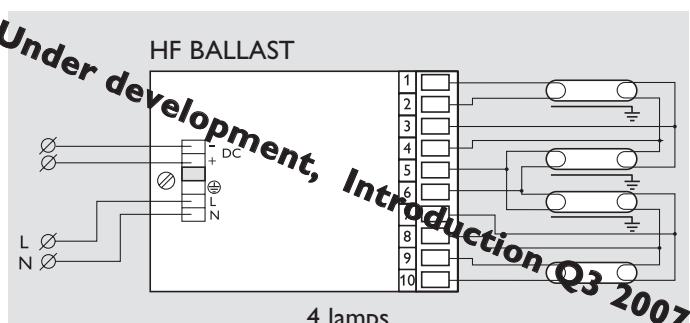

## Wiring tips

- Earth connection to be made via housing or mains connector. Wiring inside fixture should be straight and as short as possible. Lamp wires should not run parallel to mains or control wires to avoid EMC problems. For optimal performance, note that:
- For one lamp ballasts wires 4 and 5 as short as possible, equal in length and a minimum of 50 mm from mains or dim wires. Keep lamp wires 6 and 7 equal in length.
  - For two lamp ballasts wires 3, 4 and 5 as short as possible, equal in length and a minimum of 50 mm from mains or dim wires. Keep lamp wires 6 and 7 and 1 and 2 equal in length.

## Notes

1. Data based on a mains supply with an impedance of 400 mΩ (equal to 15 m cable of 2.5 mm<sup>2</sup> and another 20 m to the middle of the power distribution), under worst case conditions. With an impedance of 800 mΩ the number of ballasts can be increased by 10%.
2. Measurements will be verified in real installations, therefore data are subject to change.
3. In some cases the maximum number of ballasts is not determined by the MCB, but by the maximum electrical load of the lighting installation.
4. Note that the maximum number of ballasts is based on the assumption that these are all switched on at the same moment, i.e. by a wall switch.
5. Measurements were carried out on single-pole MCB's. For multipole MCB's it is recommended to reduce the number of ballasts by 20%.
6. For optimum performance care has to be taken for symmetrical wiring. Minimal 6 mm distance from lamp to earth plane.
7. In case of DC operation the HF-R 280 TL5/PL-L EII will have maximum 40% light output.
